

Steps to view integration instructions for Application

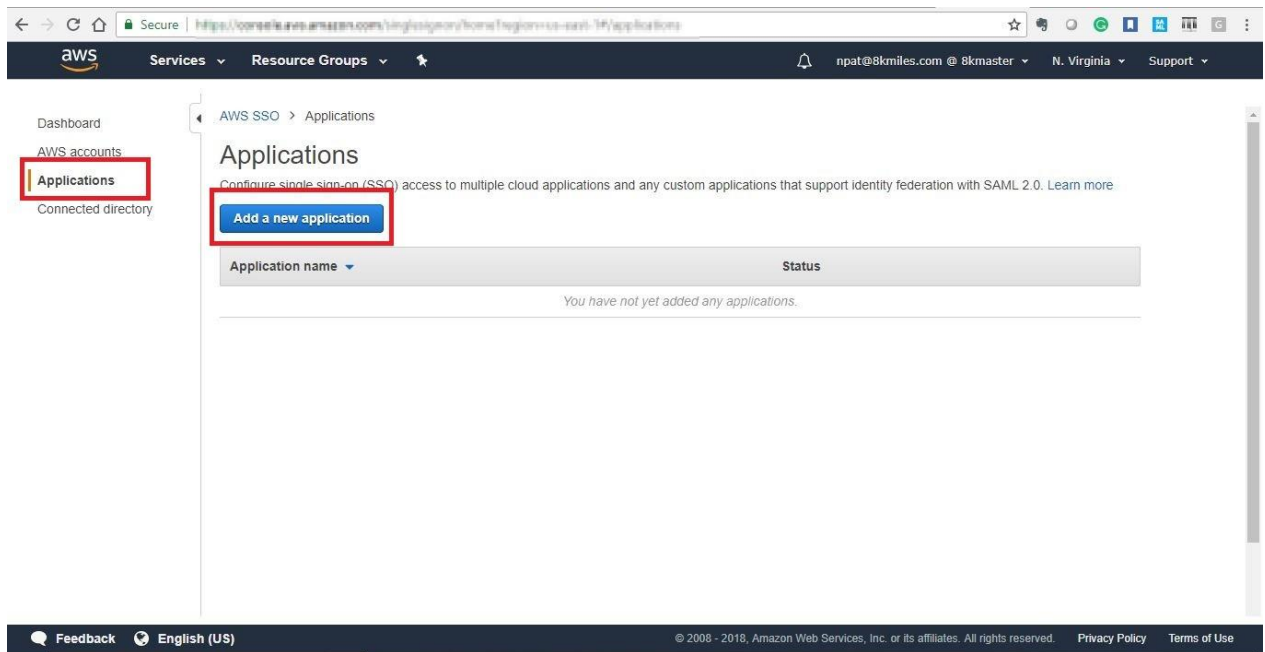

Step 1: Login to AWS using the credentials of a user assigned to the AWS console.

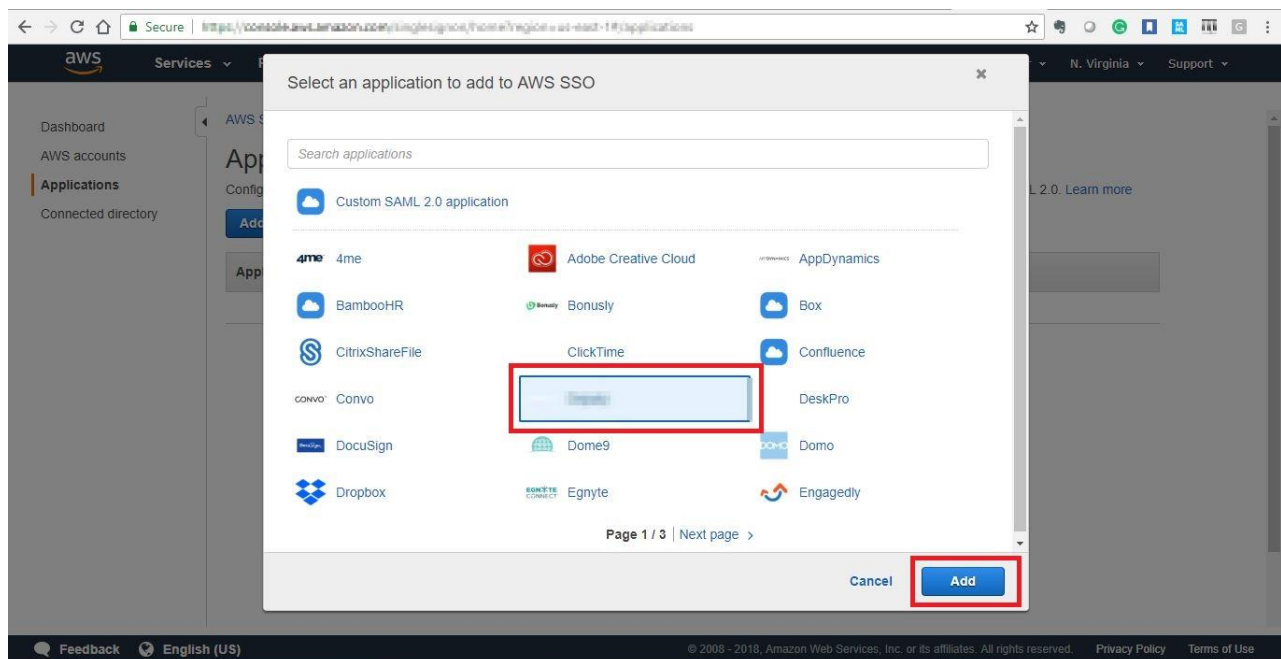

Step 2: Search for **AWS Single Sign-on** in the search bar under AWS services, and click the option from the suggestions.

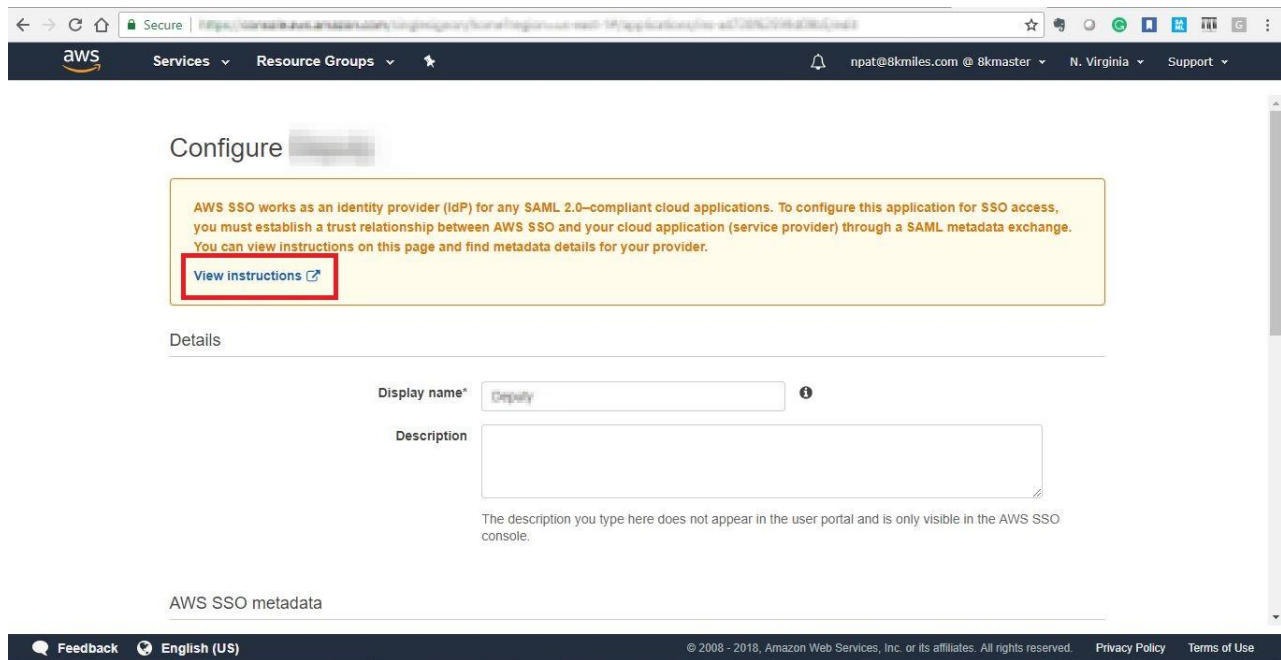

Step 3: Click **Applications** in the left pane, and click **Add a new application**.

Step 4: On the **Select an application to add to AWS SSO** pop-up window, click **Application**, and click **Add**.

Step 5: Click **View Instructions** on the Configure Application page.

A new tab displays the integration instructions for Application. Users can perform the federation with the use of the instructions.
