

Option Section	Option Name	Option Notes
Page View	Show questions grouped in one or more pages (clustered by break pages)	The break pages are added and sequenced by you when adding questions to your test. Refer to the "How to Create a Test and Manage Question Types" article in Docebo's Knowledge Base for more information on adding break pages to your test.
	Show one question per page	If you added any break pages or titles to your test and you flag this option, they will be ignored.
Questions	Show all questions arranged in sequence set on test's <i>Edit</i> page	This sequence is determined by you. Using the cross icon in each question's row in the list of questions on the test's Edit page, drag and drop each question in a specific order.
	Show all questions in random order (set sequence ignored)	All questions on the same page of a test will be randomized. If you added any break pages or titles to your test and you flag this option, they will be ignored.
	Show x questions out of x available. LMS selects questions at random and they change for each attempt.	If you flag this option, not all of the questions will be displayed in the test for the user, depending on what you type into the text box. For example, if you've created 11 available questions, but you type the number 6 into the text box, 6 of the 11 available questions will be randomly selected and presented to the user. The selection changes per attempt and per user. If you added any break pages or titles to your test and you flag this option, they will be ignored.
	Show a certain number of questions from each category LMS selects questions at random and they change for each attempt	Questions will be randomly selected based on the categories in which you placed them when you created the question. Please refer to this article to learn more about creating question categories. Once this option is flagged, you can type a number into the text box to indicate how many questions you would like your users to answer. For example, if you've created 14 available questions, but you type the number 7 into the text box, 7 of the 14 available questions will be randomly selected and presented to the user. The selection changes per attempt and per user. If you added any break pages or titles to your test and you flag this option, they will be ignored.

	<p>PLEASE NOTE: If you flag the 3rd or 4th option in this section, you cannot have the questions on more than one page. All questions must be on the same page, and break pages will be ignored. For the 2nd, 3rd, and 4th option, the title will be ignored.</p>	
<p>Answer View</p>	<p>Show all answers arranged in sequence set on question's <i>Edit</i> page</p>	<p>The answers for each question will appear as you've arranged them when you created the question.</p>
	<p>Show all answers in random order if allowed by question type. LMS randomizes answers upon each attempt</p>	<p>The answers for each question will automatically have a random order if that specific question type allows randomization of answers. If you flag this option, the option to <i>Shuffle Answers</i> when creating each individual question will be greyed out; so you cannot flag the option to shuffle answers for an individual question.</p>
