SERIOUS GAMES

Our Serious Games library is empowered by Artificial Intelligence routines: this means that the self-training process becomes dynamic, engaging and highly stimulating, by involving the students in real-life situations and measuring outcomes accordingly.

Serious Games require users to make decisions in a context-driven scenario. Users' choices are measured using variables and dynamic parameters for the final feedback result. The measurement of these variables can be easily adapted, along with the management of an Intelligent Feedback tool.

MOBILE LEARNING

Learning is more and more a just-in-time, ubiquitous process, which requires the availability of multiple delivery options. Docebo designs multimedia courses already compliant with Mobile technologies.

These Mobile Content Pils allow users to stay engaged while learning on the move, leveraging the built-in capabilities of Tablets and Smartphones.

EMOTIONAL VIDEOS

Emotional videos are short video pills, designed and thought in order to support the roll-out of a new E-Learning project, promoting the idea and concept across the end user population.

Communicating values and emotional incentives is useful to support and promote specific learning objectives and target highest learning outcomes. Emotional videos enable as well to achieve organizational buy-in for the E-learning project, and augment significantly the end-users drive and motivation.

The Video is also a powerful Marketing tool, able to generate hype related to a product that has to be launched on the market.
