Extended
Enterprise Training

In today's global marketplace, organizations need to expand and transform their business networks to grow and remain competitive. As companies grow their product portfolios, they see the need to expand their customer support and education to reach many audiences. Extended Enterprise solutions allow organizations to provide consistent and quality training across all channels so that they can effectively reach partners, contractors, suppliers, distributors and customers, just to name a few!

Extended Enterprise Training ensures the delivery and tracking of training to ensure compliance. It guarantees the same level of competency and product knowledge across a global workforce to increase the time to performance for new or updated knowledge and know-how on products and services. Cost of training is also reduced with new introductions of products and / or services on the global marketplace. With such training, support is optimized and customers receive better quality customer service.

What's more, Docebo's Extended Enterprise solution helps organizations to combine learning and e-commerce to transform businesses and generate additional revenue, both directly and indirectly.

Train your entire network

Correlate data to business results

Generate additional revenue

With our solution for Extended Enterprise you can manage the following:

- Deliver media-rich and better content (with less redundancy) to a broader and wider audience.
- Create custom learning environments for different groups of users, customize templates and assign specific domain names with the Multi-domain App.
- Manage large numbers of users, groups, business units, or any other silo within your user base with a user management tool.
- Manage user hierarchies and create power users with customized permissions.
- Manage custom reports and certificates separately for each group.
- Increase partner collaboration and involvement in the training process to see an increase in partner sales.
- Manage multiple course catalogues.
- Create a revenue channel by selling existing courses and certification programs and recoup the cost of developing training.
- Enhance training efficiency by enabling training on all devices.
- Provide training globally in over 30 languages
