

## Sealed Air Corporation reap the benefits of using the Docebo E-Learning Platform

**Naples, Italy, April 10, 2014,** In the six months after implementing the Docebo E-Learning Platform, over 1,000 [Sealed Air Corporation](#) customers have accessed learning materials via the system – and, each month, the number of customers in the system is growing.

According to Sealed Air, a global leader in food safety and security, facility hygiene and product protection, it's confident that it made the right choice and that Docebo is an ideal partner. The Docebo learning management system (LMS) provides both the option to customize the system to any specific needs and also allows Sealed Air to customize the system to different target audiences and, thus, achieve tangible business goals through e-learning.

“Our industry is defined by subject matter expertise and compliance in a global marketplace,” said Marc Robitzkat, Sealed Air’s Global Customer and Application Learning Leader. “So it’s crucial for us, as a global market leader, to share the right know-how with our customers so that they can operate safely, increase their productivity and ensure operational sustainability.

“Docebo, the global E-Learning Software-as-a-Service (SaaS) solutions provider, has given us the opportunity to deploy a state-of-the-art learning management solution to reach our global audiences and manage our resources centrally in a consistent manner, adding performance cloud technology to our blended learning approach.”

Producing and distributing a range of products and services, as well as providing its customers with key industry knowledge and expertise in the field of sustainability, safety and operational compliance, [Sealed Air](#) wanted to provide a unique learning solution for its customers that provides all these things and also allows its customers to benefit from a state-of-the-art learning tool to help them use and customize their own learning materials as well.

So Sealed Air looked for a state-of-the-art LMS which could cope with large numbers of users globally and allow a ‘delegation approach’- enabling its customers to give their employees access the relevant learning materials, allow certain members of these companies ‘administrator rights’ and prevent customers’ administrators being able to see both what other Sealed Air customers were learning and also how they were performing.

In looking for this – in Sealed Air’s view – ‘ideal’ LMS, Sealed Air carried out an extensive review of market leading LMSs before selecting the [Docebo](#) Enterprise solution because it offered the flexibility of a cutting-edge, accessible, up-to-date and updatable LMS.

“Now, some months since it deployed the Docebo platform, Sealed Air produces high quality, video-intensive SCORM-compliant learning content,” commented Alessio Artuffo, Docebo’s Chief Operating Officer in North America. “Moreover, the Docebo platform allows Sealed Air to reuse all the legacy SCORM-compliant learning content that it had – and the system tracks all the users’ learning experiences.

“With the Docebo LMS, Sealed Air can customize content for specific audiences – and it’s now delivering learning materials to customers throughout the world.

“It can also use the platform to communicate and network with its audience on current issues of generic business and specific sector interest,” he added. “While security, safety and compliance are all key factors for Sealed Air and its customers, the company is able to certify and manage performance data, allowing it to benchmark the overall goals and performance.”

Sealed Air believes that it’s experiencing a positive trend towards the numbers of enrolments and training materials utilized. Moreover, the feedback from Sealed Air’s customers, as well the company’s internal audience has been outstanding.
